

Cable Connector Dix25 Male- Female

Item No.: 361362222

Product information

Complete male-female cable connector DIX25 for single phase welding machine.

To minimize the risk of handling or shorting through the deck, the cable connectors must be properly insulated.

This applies to both related and unrelated parties. The possibility of a short circuit, in the connected plugs and sockets, connected to the cables, should not exist, even if they should come into occasional contact with salt water.

At the welding cable connections and at the contact areas to the connectors, there must be good contact and little resistance.

Features

- 230 A at 60 % duty cycle
- For cable size 10--25mm²

Benefits

- The need for replacement of damaged lengths of welding cable is eliminated
- Manhandling of long welding cables, often more time consuming and strenuous than the actual welding job, is avoided
- Permanently installed and correctly dimensioned cables ensure more efficient use of power from welding machine
- Accidental falling/tripping due to loose cables along decks, in ladders etc. is avoided
- Accidental short circuiting somewhere along the often excessive lengths of live welding cables lying about is prevented

Specification
