DEFOAMER LIQUID

DESCRIPTION

Defoamer Liquid is a non-silicone based water dispersible, liquid defoamer. It controls foaming in sewage and waste water systems, and it is stable in alkaline conditions.

DIRECTIONS FOR USE

Effective dosage will vary depending on foam origin, stability and the area of defoamer application. Trials are always the best way to determine defoaming capabilities and efficiency.

DOSING METHOD

Typical dosage is 10 to 30ml/tonne, but proper dosage rate to be found out on site testing.

The recommended dosing method for sewage systems is to premix 1 part of Defoamer Liquid with 5 parts of fresh water and pump this into the Vacuum ejector tank. The dosing is done about 1/2 hour before top load.

DEFOAMER LIQUID

Used to remove foam in water based systems and collecting tanks in vacuum toilet systems

Features

- Non-silicone defoamer
- Stable in alkaline conditions
- Outstanding for all atmospheric, pressurised and continuous waste equipment

Benefits

- Can be used in sewage and waste water systems
- Excellent to control foaming and remove foam when necessary

PRODUCT CHARACTERISTICS

Appearance: yellow, brown

Density [g/ml]: 0,86-0,90

Flash Point: 85

Form: Liquid
