

BIO CONTROL COOLING WATER TREATMENT

APPLICATION

A highly effective non-oxidizing biocide with broad-spectrum activity against a wide range of microorganisms, including algae, fungi, and bacteria such as Legionella pneumophila and sulfate-reducing bacteria.

FEATURES

- Effective against bacteria and algae in the water
- Easy to use
- Simple control / monitoring program

DIRECTIONS FOR USE

STERILIZATION OF WATER SYSTEMS

Bacteria can cause significant corrosion problems by producing acids and forming slimy layers on metal surfaces, leading to reduced heat transfer and damage to bearings.

Since nitrites and phosphates serve as nutrients for bacterial growth, controlling them is essential. Biocontrol is a highly effective disinfectant for eliminating bacterial contamination.

It can also be applied in lower doses as a preventive treatment. For effective use, apply 500–700 ml of BIO CONTROL per cubic meter of system volume.

These basic instructions are intended to give a reasonable guide to the actions required.

Please contact UNIMARINE for more detailed and specific recommendations.

Code: **161162213**

BIO CONTROL COOLING WATER TREATMENT

A microbiological control agent for use in the cooling water system.

PRODUCT CHARACTERISTICS

Specific gravity: 1.01 (20°C)
Flash Point: None
