Iron In Oil Test Kit (with optional PrimeLab 2.0 Photometer)

Item Code: 5151

Test kit for determining **iron-in-oil concentration in lubricants**, available as a single solution and/or for use in combination with the photometric method ID 149.

No error-prone chemical mixing: chemicals come in **tablets & preset vials**.

Measures **total iron**, not only corrosive iron. With magnet, abrasive iron can also be measured separately.

See technical information and user manual attached.

Advantages of our Kit:

Test kit can be **combined with the Photometer** and provide **extra testing** at the customer's request.

✓ Quick & Accurate Analysis

✓ Easy Handling & User Friendly

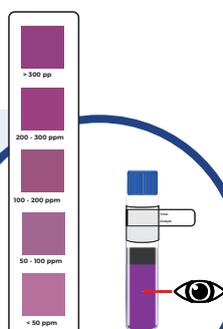

✓ Ideal for on-site applications

Availability: Major ports

OPTION A - Simple Test Kit

Test Kit **without** Photometer -
Visual comparison method

OPTION B - Test Kit + Photometer

Test Kit **with PrimeLab 2.0 Photometer** -
Higher precision and digital results
